

MULTIPLY STABLEFORD

This is played in teams of two and can be combined with an individual event.

- Each player plays a normal stableford round taking strokes in accordance with the stroke index.
- The team scores points by simply multiplying the two individual stableford scores for each hole.
- The winner is the team with the highest total of team points for the round.
- The challenge of this format is for the players to avoid a “wipe” as this immediately negates any points his partner may score e.g. 3 x 0 = 0
